**Description:**
Complement is collected from 8-12 week old rabbits and stored at -70 °C or below.

**Physical State:**
Frozen liquid

**Testing:**
Hemolytic titer: ≥ 1:16

**Packaging, shipping/storage:**
- Packaging
  - 5 mL: Glass vial; 100 mL and 500 mL: Polypropylene bottle

**Storage Temperature**
-70 °C or below

**Shipping Conditions**
Dry ice

**Expiration**
Product quality is guaranteed to meet Pel-Freez Biologicals’ specifications for 1 year from the date of receipt by the customer as long as the product is stored in accordance with the indicated storage conditions.

**Application Notes:**
Reportedly suitable for HLA -ABC tissue typing /lymphocytotoxic assays. Product is tested for titer. Complement components are extremely heat-sensitive; for best results, thaw complement on ice or in a cold water bath (ideally thaw bottled complement under a stream of cold water, ~20°C); never thaw using warm or hot water. Single-use aliquots may be made at this time and frozen at -70°C. Avoid multiple freeze-thaw cycles. When a working aliquot is thawed, do not re-freeze remaining complement but discard it.
